Embark!

Embark! is a fully developed and deployed website made with a team of three developers through the Iron Yard. Using API consumption through jQuery/Ajax, and built on a Python/Django framework, Embark! is meant to be used as a tool for people looking to change careers. Taking user input, Embark! routes information through glassdoor.com and indeed.com to bring up real time job listings based on user preference and company culture scores.

Team: Lina Breslav, UI/UX Developer

Sanchith Kuttappa, UI/UX Developer

Question Box

Question Box is a development exercise designed for work on generating relational database tables and deploying on heroku. Made to have the same functionality as StackOverflow, users are able to generate questions and answers, vote on the validity of those answers, and filter through questions based on what tags are selected during creation.

Team: Maksym Tymsiv, Python/Django Developer

Nightly Stats

Nightly Stats is my current work in progress. Pulling from my previous experience with restaurant management, Nightly Stats is a database manager that will allow information from each shift to be organized in a way that will help filtering as well as using each shift's data in a new presentation format. This app will eventually lead to an overarching project of restaurant budget software.
